Formation Office 3.4 E Corrections

Reports – Corrections

- ◆ The Substantiation page that is printed on some tax reports was printing Quid Pro Quo amounts twice.

Student Screen – Corrections

- ◆ When sharing data with Church or School and you reassigned a student that was visible in both programs to a family that was visible in Formation Office but not in the other program, the result was that the student could still be seen in Church or School, but you could not see their family information. The Reassign Member process has been modified so that if the family to whom the member is to be assigned is not visible in the programs where the member is visible, the program will automatically make that family visible.
- ◆ Changing the Birth Date on the General Sacraments Screen was not recalculating the day of birth, month of birth and year of birth values which are used on certificates. So after the change was made, if a certificate was printed, the original birth date was printed on the certificate instead of the new birth date.

Parent/Guardian Screen - Corrections

- ◆ A user with no access privileges for Parent/Guardian confidential remarks could still see the confidential remarks when they should not have been allowed to.

Fund Setup Screen – Corrections

- ◆ Using the Transfer Activity button on the Fund Setup Screen was displaying the error “FamFundTmpTbl: Field ‘MemRecNum’ not found”

Quick Posting Processes– Corrections

- ◆ During the Quick Posting of Terms & Rates process, if you used the Individual Entry method and selected to add a family by choosing their ID Number, the labels in the grid at the bottom of the screen were not getting filled in.

Other Corrections

- ◆ If no e-mail address was entered for the church and you started the Cass Export process, then canceled, the program could lock up.
