Update Records Outreach

Engage Your Church, Members and Visitors... Like Never Before!

Create and maintain a professional-looking public Web site. Even the non-technical can create an outstanding site and easily make changes whenever they want.

Add privacy to your public site. You simply choose the pages and the content. The ACS Web Solution takes care of the rest for you.

Let members update their own records. Your attendees know their personal information better than anyone, so give them the power to update their own profiles. You'll save your staff considerable time.

Make your site interactive. Let visitors to your site do more than look. Give them a reason to come back by offering opportunities to sign up to volunteer, give online, or register for events.

Give members and groups their own spaces. You can go beyond the traditional Web site by creating private portals for individual groups. And the best part – the ACS Web Solution acts as your gatekeeper automatically.

Access church records anywhere. You no longer have to be in the office. Church leaders can log in from their remote or handheld devices to access records regardless of their location.

What is the ACS Web Solution?

The ACS Web Solution combines two individually dynamic Web-based solutions into one powerful communication tool.

The Power of Two. Together, Extend and Access ACS create a complete Web solution package for your ministry, allowing your organization to create a public site and a private site all in one. And with complete synergy between your site and your church database, updating your church records has never been easier.

Extend® is a superlative content management system that lets any user of any Web experience edit the content, pages, and layout of your Web site to create an appealing representation of your ministry. Its built-in editorial processes ensure that your site is up to date and appropriate, allowing your Webmaster to focus on strengthening the value of your site rather than simply being responsible for all areas of the site. From a small organization site to a complex community of sites, Extend is the solution for you.

Access ACS™ is a Web-based companion to your church database, giving your members and staff access to church data anytime, anywhere. With communication as its backbone, Access ACS becomes a central point of connection for your church to build stronger relationships, become financially and actively involved, and connect to areas of ministry and growth. With access to attendance, small groups, calendars, activities, contributions, and so much more, your congregation will never lose its connection to the church.
